Event Report

Developing Nations: Tech Management in Flux
 Technology management in developing countries faces unique challenges (limited infrastructure, skilled workforce) but also vast opportunities (leapfrogging, young population).

Key aspects:
 Innovation Ecosystems: Collaboration between academia, industry, and government fosters research and development.

Capacity Building: Investing in education equips the workforce to handle new technologies.
 Government Initiatives: Policies promoting innovation, funding R&D, and enabling technology transfer are crucial.

Sustainable Development: Technology should address social and economic needs, reducing inequality.
 Global Collaboration: Partnerships with developed nations and knowledge sharing accelerate progress.

Effective management requires a comprehensive approach: addressing limitations, harnessing opportunities, fostering innovation, and prioritizing sustainability. This paves the way for developing countries to become key players in the global technological sphere.

Overall the programme added value to the participants
